

for **SOYBEANS**

New for 2019

SabrEx for Soybeans is the newest offering in the SabrEx family of products from ABM. It's a biological seed treatment that is easy to use and delivers increased profitability to growers. It enhances nutrient efficiency that supports root and plant growth. SabrEx for Soybeans is compatible with many common seed treatments and can be very beneficial to soybeans inoculated with Bradyrhizobia.

Available in three formulations:

- PB is a low volume, talc/graphite based planter box treatment.
- In-Furrow is a liquid applied at planting.
- LQ is a liquid applied to the seed by a commercial seed treater.

SabrEx for Soybeans will:

- Create more robust root systems
- Increase water and nutrient efficiency
- Increase yields
- Induce resistance to plant stresses like dry weather

iGET™ Technology

The proprietary and patent pending biologicals first colonize the crop root system. Their association with the plant induces gene expression and changes in the plant physiology to enhance multiple biochemical pathways. Crop stresses such as dry weather can be alleviated, and often systemically – so that root colonization by the seed treatment can affect the physiology of the whole plant, even foliar/leaf biology.
